[57] **ABSTRACT**

A system and method for providing on-line third party accounting and statistical information is disclosed. A third party accounting service receives a download request signal ultimately intended for an advertiser Web site. The download request signal is generated when a user clicks on a banner displayed on a Web page of a frequently-visited Web site. The banner is published by the frequently-visited Web site for the benefit of the advertiser. The third party receives the download request since, rather than pointing to the advertiser Web site, the banner is configured to point to the third party Web site. The third party Web site maintains a count of all received download request signals generated by clicking on the banner. Since an advertiser banner may be displayed at more than one frequently-visited Web site, the third party Web site further maintains a log containing the address of the frequently-visited Web site that displayed the banner that generated the click, as well as other information provided by the user Web browser. The third party sends a redirect signal to the user Web browser causing it to send a download request to the advertiser Web site. The advertiser Web site then downloads the information originally sought by the user to his Web browser. The third party accumulates and tabulates statistical information including the number of clicks on the advertiser banner, and data indicative of the effectiveness of the banner-publisher frequently-visited Web site as an advertising medium. Such information is provided to the advertiser and/or the banner publisher.

1

**THIRD-PARTY ON-LINE ACCOUNTING
SYSTEM AND METHOD THEREFOR**

FIELD OF THE INVENTION

The present invention relates to Internet services.

BACKGROUND OF THE INVENTION

Until as recently as five years ago, the Internet was used primarily by the scientific and technical community and was relatively unknown outside of such circles. And now, five years hence, knowledge of the Internet, and its use, are ubiquitous.

Businesses have recognized the benefits of establishing a presence on the Internet, and, more particularly, on the World Wide Web (Web). One benefit is that it is a convenient way for both the buyer and the seller to do business; products and services can be ordered on-line. Another benefit to a business is that for the money spent, its advertising can reach a lot of prospective customers.

One form of Internet advertising is to establish a Web site operable to download at least one "Web page" to a user "visiting" that Web site. A Web page contains a single file of hypertext information, which may be text, graphics and even sound. The main Web page of a given Web site is referred to as a "Home page." The Home page is typically the first page a user will see when visiting a site. The Home page usually contains hypertext "links," to other subsidiary Web pages providing additional information about the business.

A Web site is ineffective as an advertising tool unless someone visits it. And, the only ones visiting the site are those that have sought it out. To increase the likelihood of such visitations, businesses may list their Web site on one or more Web directories. A user interested in particular products or services can use a search engine to search the Web directory and identify businesses providing such products or services and their Web address. The user can then "browse" the Web sites of the businesses offering the products/services of interest.

A directory listing increases the likelihood of a user finding the Web site of a particular business. Still, an advertiser listing will be found only if the user is looking for the goods or services provided by the advertiser. As such, many frequently-visited Web sites offer businesses a more aggressive alternative to a simple directory listing. In particular, a business can choose to have a "banner" displayed or "published" by such a frequently-visited site.

The banner describes an area of a Web page that can be used to display logos, etc., that will hopefully entice the reader to obtain further information pertaining to the banner. If so enticed, the reader can "click" on the banner, assuming the banner is a link, and follow the link to, for example, the Web site of the business "behind" the banner. The banner provides substantially more of an advertising presence to the advertiser than a directory listing, since, at least for a contracted period of time, the banner is conspicuously displayed on the Web page. Thus, regardless of a user purpose for visiting such a site, he may see the advertiser banner displayed.

While there is typically no cost for having one Web site listed in a directory, advertising with a banner is typically provided for a fee. The cost of advertising at such a site may be based, for example, on the number of times the site displays the banner or on the number of times a user clicks on the banner linked to the advertiser Web site. And, of course, the cost is based on the popularity of the frequently-

2

visited site. While anyone with a Web site can display a banner, advertisers will want to advertise at frequently-visited sites, such as Web directories and large service providers that offer their own information and online resources as well as Internet access such as America Online, CompuServe, Prodigy and the like.

Regardless of the fee basis, both the advertiser and the administrator of the banner-publishing site will typically have an interest in knowing certain statistics pertaining to advertising effectiveness. For example, if the fee for the advertising is based on the number of clicks on the banner, then both parties will want this statistic. The advertiser can obtain this information by interrogating an access log maintained by the advertiser Web site. This information, however, is not directly available to the banner-publishing site. While it can be obtained from the advertiser, the publishing-site administrator would presumably prefer receiving the relevant statistics from an unbiased source.

Further, since advertisers will often advertise at more than one location, both the advertisers and the publishers will typically have an interest in the statistics pertaining to the effectiveness of an individual publishing site at generating leads for the advertiser. In other words, they will be interested in knowing the percentage of the total number of "clicks" on the banner generated by each publishing site. Currently, such information is not readily available. To obtain it requires that the appropriate expertise is available, and that the server at the advertiser Web site is appropriately configured.

In view of the value of such statistics, and the relative inconvenience in obtaining such information, a need presently exists for an unbiased, readily available source of statistical/accounting information for Internet advertisers and advertising publishers.

SUMMARY OF THE INVENTION

A system and method for providing on-line third party accounting and statistical information is disclosed. According to the invention, a banner, displayed for the purpose of enticing a first party (user) to visit a fourth party's (advertiser) Web site, is served to the user's Web browser by a second party (banner publisher). The banner is operable to download the address of a third-party (accounting and statistical service) to the user's Web browser and establish a link between the user and the third party service. The third party service receives a download request signal from the user's Web browser when the link is established, and maintains a count of received request signals and a log entry containing the second party's Web site address and other information provided by the user's Web browser. The third party service redirects the Web browser's download request signal to the advertiser's Web site, which serves a Web page to the user's Web browser. The method is transparent to the user; i.e., as far as the user is aware, the banner takes him directly to the advertiser's Web site.

The third party accumulates and tabulates statistical information including the number of clicks on the advertiser's banner, and further provides data indicative of the effectiveness of the banner publisher's Web page as an advertising medium.

BRIEF DESCRIPTION OF THE DRAWING

Further features of the invention will become more apparent from the following detailed description of specific embodiments thereof when read in conjunction with the accompanying drawings, in which:

3

FIG. 1 shows a conventional system for advertising with a banner;

FIG. 2 is an exemplary embodiment of an on-line third party accounting and statistical system according to the present invention; and

FIG. 3 is a flow diagram of an illustrative method for implementing the system of FIG. 2.

DETAILED DESCRIPTION OF THE INVENTION

The present invention can be implemented over a network such as the Internet. It is understood that such a network is comprised of many computers linked over telecommunication lines and communicating using various standard protocols. Servers, which are programs that provide Internet resources (e.g., a Web page), and clients, which are programs that access those resources on a user's behalf (e.g., a Web browser), are resident on such computers. Details concerning such computers and software, and the process of establishing communication links are known to those skilled in the art and will not be described herein except as appropriate for an understanding of the present invention.

Moreover, for clarity of explanation, this specification contains terminology and conventions familiar to those skilled in the art. Such terminology is often more metaphorical than literal in nature. For example, while those skilled in the art may refer to "visiting" a particular Web site, it should be appreciated that a user does not actually travel to the web site. Rather, a source file that is operable, in conjunction with the user's Web browser, to generate a Web page on a user's computer monitor is downloaded to the user's computer. Those skilled in the art are familiar with such metaphorical terminology and have an understanding of its literal implications and implementations.

FIG. 1 shows a prior art on-line system for advertising, with a banner 9. As shown in FIG. 1, a user's Web browser 3 establishes a link or connection 11 with a Web site 5 of an entity displaying the banner ("banner publisher"). The banner publisher is anyone who presents advertising on behalf of an advertiser. The banner publisher will typically be a Web directory or a large service provider such as America Online, Compuserve, Prodigy and the like that offers their own information and online resources, as well as Internet access.

Once the user is on-line, i.e., connected to the Internet through an Internet Service Provider (ISP), the link 11 to the Web site 5 is established by "entering" the address, i.e., the uniform resource locator (URL), of the Web site 5 into the Web browser 3. Once the link 11 is established, the Web browser 3 sends a download request signal 11a to the Web site 5. In response, the Web site 5 downloads information, indicated by the reference numeral 11b, to the user's Web browser 3. The downloaded information includes a Web page 7 having a banner 9. The banner 9 is an area of the Web page 7 that can be used to display logos, etc., that will hopefully entice a user reading the banner to obtain further information pertaining to the banner.

As will be appreciated by those skilled in the art, a Web page is a hypertext file or source located on a specific computer. The hypertext source includes text as well as instructions for the user's browser as to how to display such text. The instructions are coded using a set of specifications referred to as Hypertext Markup Language (HTML).

The hypertext source contains one or more hypertext "links" that "point," i.e., provide the address, to another hypertext file. If a user wishes to "follow" the link, the user

4

can "click" on it, such as by depressing a mouse button. The user's browser then connects to the, appropriate Web site (computer), as dictated by the URL, associated with the link, and sends a download request signal for a copy of the hypertext source associated with the URL. When the copy arrives, the browser displays the file in a format dictated by the HTML, generating a Web page on the user's browser. Included in the downloaded copy are the specifications of the banner 9 and associated links.

If enticed by the banner 9, the user can "click" on it, assuming the banner has a link associated with it. In the prior art, a banner typically points to the Web site 17 of the advertiser. A download request signal 19a is sent from the user's Web browser 3 to the advertiser's Web site 17. The Web site 17 downloads information, indicated by the reference numeral 19b, to the user's Web browser 3. The downloaded information is a copy of a hypertext source file operable to generate a Web page of the advertiser.

FIG. 2 shows an exemplary embodiment of an on-line third party accounting and statistical system 1 according to the present invention. As shown in FIG. 2, the system 1 includes the elements of FIG. 1, as well as the Web site 13 of a third party accounting and statistical service, and the link created between the user's Web browser 3 and the third party Web site 13. With the addition of the Web site 13 of the third party service, and appropriate programming, the information flow between the user and the various Web sites changes, as described below.

As described above for conventional systems, the link 11 to the Web site 5 is established by entering the URL of the Web site 5 into the Web browser 3. Once the link 11 is established, the Web browser 3 sends a download request signal 11a to the Web site 5. In response, the Web site 5 downloads information, indicated by the reference numeral 11b, to the user's Web browser 3. The downloaded information includes a copy of the requested hypertext source file operable to generate a Web page 7 having a banner 9.

As before, if the user is interested in more information about the banner 9, he may click on it. According to the present invention, the banner 9 points to the third party Web site 13 rather than the advertiser's Web site 17 as in conventional arrangements. As such, in a system according to the present invention, clicking on the banner 9 establishes a link between the user's Web browser 3 and the third party Web site 13. This is facilitated by the operation described in operation block 101 of the flow diagram of FIG. 3, which is an exemplary method according to the present invention. According to operation block 101, the hypertext file that generates the Web page 7 and the banner 9 is edited or originally coded so that the banner 9 is operable, in conjunction with the user's Web browser 3, to form a hypertext link to the third party Web site 13 when clicked upon. The aforementioned coding includes the URL pointing to the third party site 13.

If a user clicks on the banner 9 forming a link to the third party, then, as indicated in operation block 103 of FIG. 3, the third party accounting and statistical service 13 receives a download request signal 15a from the user's Web browser 3. The third party service 13 accepts the download request signal 15a and increments a counter that keeps track of the number of received request signals, as indicated in operation block 105. Additionally, the third party service 13 logs a variety of information available from the user's Web browser 3. Such information can include the origin of the user, the address of the banner publisher, and so forth. In this manner, the third party service 13 accumulates statistical information useful to the banner publisher and the advertiser.

The download request received by the third party service 13 is ultimately intended to obtain information from the advertiser. As such, the third party service 13 redirects the received download request signal to the advertiser's Web site 17, as indicated in operation block 107. Specifically, the redirect request 15b is sent to the user's Web browser 3 from the third party Web site 13, and, from the browser, a download request 19a is sent to the advertiser's Web site 17. Once the download request signal is received by the advertiser, the advertiser's Web page is downloaded to the user's Web browser 3 as indicated by reference numeral 11b. The method is transparent from the user's point of view; he is not aware of the "detour" to the third party service 13.

In one embodiment, operation blocks 105 and 107 can be accomplished as follows. A Hypertext Transfer Protocol (HTTP) server program at the third party's site 13 is configured to issue a "302" redirect response when a specific URL is requested. Such configuration involves editing a configuration file for the HTTP server program. When the specific URL is requested, the request itself and Web browser 3 information is recorded, and the redirect to the intended URL, i.e., the advertiser's Web site, is issued. In this manner, the user is transparently redirected to the advertiser's Web site 17.

It will be appreciated that an advertiser may wish to advertise at more than one location, i.e., more than one banner-publishing site. If so, the advertiser will presumably want to know, among other statistics, the effectiveness of each of the publishing sites, i.e., which site generates the most visits to the advertiser's Web site 17. Likewise, a banner-publishing site may wish to display the advertising, i.e., banner, of more than one advertiser. In a further embodiment, the present invention can tally clicks and generate statistics for multiple banner-publishing sites and multiple advertisers. This is accomplished by using multiple URLs, each pointing to different entry points at the third party Web site 13. The third party Web site, more properly its server, accepts the incoming URLs, accumulates statistics, and redirects each user's Web browser 3 to the intended (advertiser's) Web site in the manner previously described. Thus, clicks originating from different publishing sites, as well as those intended for different advertisers, are each directed to different entry points at the third party Web site 13. Assigning multiple URLs for this purpose is illustrated by the example below.

For the present example, there are two banner publishers, "Pub A" and "Pub B" and three advertisers "Ban 1," "Ban 2" and "Ban 3." Advertisers Ban 1 and Ban 2 have their banners displayed at both publishers' Web sites. Advertiser Ban 3 displays its banner only with Pub A. Exemplary URLs for the five banners are as follows.

Banner Publisher	Advertiser	URL
Pub A	Ban 1	http://www.genesis.com/puba/ban1
Pub A	Ban 2	http://www.genesis.com/puba/ban2
Pub A	Ban 3	http://www.genesis.com/puba/ban3
Pub B	Ban 1	http://www.genesis.com/pubb/ban1
Pub B	Ban 2	http://www.genesis.com/pubb/ban2

Thus, while advertiser Ban 1's banner at publisher A points to entry point "puba/ban1" at the third party Web site 13, Ban 1's banner at publisher B points to entry point "pubb/ban1." In this manner, the present invention can handle multiple banner publishers and multiple advertisers.

As appropriate, the third party accounting and statistical service 13 can provide a report to the advertiser and/or the

banner publisher. The report may include statistic such as, for example, the number of clicks on the banner 5, the percentage of clicks that result from the banner 5 being displayed on a particular banner publisher's Web page if the total number of impressions is known, the number of clicks on the banner per day, the date and time of each click, the origin of the user and so forth. Additionally, the report may include correlations developed from such statistics and illustrative charts and graphs. Typically, such a report would be provided on a regular basis.

While the present invention finds particular utility for use in conjunction with the Internet, and, more specifically, the World Wide Web (WWW), it can be applicable to other suitably-configured networks, as well. Thus, in a more generally applicable embodiment, the present invention provides a system and a method for third party accounting on, a network consisting of a plurality of nodes, wherein a user at a first node views a first quantity of information provided by a second node (publisher) for the benefit of a fourth node (advertiser).

Although specific embodiments of this invention have been shown and described herein, it is to be understood that these embodiments are merely illustrative of the many possible specific arrangements and methods that can be devised in application of the principles of the invention. Numerous and varied other arrangements and methods can be devised in accordance with these principles by those of ordinary skill in the art without departing from the scope and spirit of the invention.

I claim:

1. A method for accounting, wherein a first publisher having a first Web site and a second publisher having a second Web site each publish advertising for an advertiser having a third Web site, the method comprising:

receiving, at a fourth Web site, a first uniform resource locator from a first user's Web browser, wherein the first uniform resource locator is obtained by the first user's Web browser from the first Web site and wherein the first uniform resource locator is associated with advertising for the advertiser;

logging, at the fourth Web site, the receipt of the first uniform resource locator, in response to the receipt of the first uniform resource locator;

redirecting, at the fourth Web site, the first user's Web browser to the third Web site in response to the receipt of the first uniform resource locator;

receiving, at the fourth Web site, a second uniform resource locator from a second user's Web browser, wherein the second uniform resource locator is obtained by the second user's Web browser from the second Web site and wherein the second uniform resource locator is associated with advertising for the advertiser;

logging, at the fourth Web site, the receipt of the second uniform resource locator, in response to receiving the second uniform resource locator; and

redirecting, at the fourth Web site, the second user's Web browser to the third Web site in response to the receipt of the second uniform resource locator.

2. The method of claim 1 wherein the advertising published by the first publisher is a first banner that is associated with the first uniform resource locator and the advertising published by the second publisher is a second banner that is associated with the second uniform resource locator.

3. The method of claim 1 further comprising logging at least one of an indicium of the identity of the first user and an indicium of the identity of the first publisher.

5,960,409

7

4. The method of claim 1, further comprising preparing a report for one or both of the advertiser and the first publisher, the report comprising each receipt of the first uniform resource locator by the fourth Web site.

5. The method of claim 1 further comprising configuring a Hypertext Transfer Protocol server program at the fourth Web site to issue a 302 redirect response when the first uniform resource locator is received.

6. The method of claim 5 further comprising editing a configuration file for the Hypertext Transfer Protocol server program.

7. A method for third party accounting on a network that comprises a plurality of nodes, wherein a first node and a second node each publish advertising for a third node, the method comprising:

receiving, at a fourth node, a first download request signal from a fifth node, which first download request signal is received by the fifth node from the first node;

logging, at the fourth node, the receipt of the first download request signal;

transmitting from the fourth node a second download request signal to the fifth node, which second download request signal directs the fifth node towards the third node;

receiving, at the fourth node, a third download request signal from a sixth node, which third download request signal is received by the sixth node from the second node;

logging, at the fourth node, the receipt of the third download request signal; and

transmitting from the fourth node a fourth download request signal to the sixth node, which fourth download request signal directs the sixth node to the third node.

8. The method of claim 7 wherein the advertising published by the first node for the third node is a first banner that is associated with the first download request signal and the advertising published by the second node for the third node

8

is a second banner that is associated with the second download request signal.

9. A method comprising:

receiving a first uniform resource locator from a first browser, wherein the first uniform resource locator is obtained by the first browser from a first Web site that publishes advertising for an advertiser;

logging, in response to the receipt of the first uniform resource locator, the receipt of the first uniform resource locator;

transmitting, in response to the receipt of the first uniform resource locator, a second uniform resource locator to the first browser, wherein the second uniform resource locator is associated with a second Web site that is associated with the advertiser;

receiving a third uniform resource locator from a second browser, wherein the third uniform resource locator is obtained by the second browser from a third Web site that publishes advertising for the advertiser,

logging, in response to the receipt of the third uniform resource locator, the receipt of third uniform resource locator; and

transmitting a fourth uniform resource locator to the second browser, wherein the fourth uniform resource locator is associated with the second Web site.

10. The method of claim 9 wherein the first uniform resource locator is uniquely associated with the first Web site and the second Web site, and wherein the third uniform resource locator is uniquely associated with the second Web site and the third Web site.

11. The method of claim 9 wherein the first uniform resource locator is associated with a first banner that is published by the first Web site and that is advertising for the advertiser and wherein the third uniform resource locator is associated with a second banner that is published by the third Web site and that is also advertising for the advertiser.

ABSTRACT

A system and method for providing on-line third party accounting and statistical information is disclosed. A third party accounting service receives a download request signal ultimately intended for an advertiser's Web site. The download request signal is generated when a user clicks on a banner displayed on a Web page of a frequently-visited Web site. The banner is published by the frequently-visited Web site for the benefit of the advertiser. The third party receives the download request since, rather than pointing to the advertiser's Web site, the banner is configured to point to the third party's Web site. The third party Web site maintains a count of all received download request signals generated by clicking on the banner. Since an advertiser's banner may be displayed at more than one frequently-visited Web site, the third party Web site further maintains a log containing the address of the frequently-visited Web site that displayed the banner that generated the click, as well as other information provided by the user's Web browser. The third party sends a redirect signal to the user's Web browser causing it to send a download request to the advertiser's Web site. The advertiser's Web site then downloads the information originally sought by the user to his Web browser. The third party accumulates and tabulates statistical information including the number of clicks on the advertiser's banner, and data indicative of the effectiveness of the banner-publisher's frequently-visited Web site as an advertising medium. Such information is provided to the advertiser and/or the banner publisher.

**THIRD-PARTY ON-LINE ACCOUNTING SYSTEM
AND METHOD THEREFOR**

5 **Field of the Invention**

The present invention relates to Internet services.

Background of the Invention

10 Until as recently as five years ago, the Internet was used primarily by the scientific and technical community and was relatively unknown outside of such circles. And now, five years hence, knowledge of the Internet, and its use, are ubiquitous.

Businesses have recognized the benefits of establishing a presence on the Internet, and, more particularly, on the World Wide Web (Web). One benefit is that it is a convenient way for both the buyer and the seller to do business; products and services can be ordered on-line.
15 Another benefit to a business is that for the money spent, its advertising can reach a lot of prospective customers

One form of Internet advertising is to establish a Web site operable to download at least one "Web page" to a user "visiting" that Web site. A Web page contains a single file of hypertext information, which may be text, graphics and even sound. The main Web page of a
20 given Web site is referred to as a "Home page." The Home page is typically the first page a user will see when visiting a site. The Home page usually contains hypertext "links" to other subsidiary Web pages providing additional information about the business.

3601

A Web site is ineffective as an advertising tool unless someone visits it. And, the only ones visiting the site are those that have sought it out. To increase the likelihood of such visitations, businesses may list their Web site on one or more Web directories. A user interested in particular products or services can use a search engine to search the Web directory and
5 identify businesses providing such products or services and their Web address. The user can then “browse” the Web sites of the businesses offering the products/services of interest.

A directory listing increases the likelihood of a user finding the Web site of a particular business. Still, an advertiser’s listing will be found only if the user is looking for the goods or services provided by the advertiser. As such, many frequently-visited Web sites offer businesses
10 a more aggressive alternative to a simple directory listing. In particular, a business can choose to have a “banner” displayed or “published” by such a frequently-visited site.

The banner describes an area of a Web page that can be used to display logos, etc., that will hopefully entice the reader to obtain further information pertaining to the banner. If so enticed, the reader can “click” on the banner, assuming the banner is a link, and follow the link
15 to, for example, the Web site of the business “behind” the banner. The banner provides substantially more of an advertising presence to the advertiser than a directory listing, since, at least for a contracted period of time, the banner is conspicuously displayed on the Web page. Thus, regardless of a user’s purpose for visiting such a site, he may see the advertiser’s banner displayed.

20 While there is typically no cost for having one’s Web site listed in a directory, advertising with a banner is typically provided for a fee. The cost of advertising at such a site may be based,

3601

for example, on the number of times the site displays the banner or on the number of times a user clicks on the banner linked to the advertiser's Web site. And, of course, the cost is based on the popularity of the frequently-visited site. While anyone with a Web site can display a banner, advertisers will want to advertise at frequently-visited sites, such as Web directories and large service providers that offer their own information and online resources as well as Internet access such as America Online, CompuServe, Prodigy and the like

Regardless of the fee basis, both the advertiser and the administrator of the banner-publishing site will typically have an interest in knowing certain statistics pertaining to advertising effectiveness. For example, if the fee for the advertising is based on the number of clicks on the banner, then both parties will want this statistic. The advertiser can obtain this information by interrogating an access log maintained by the advertiser's Web site. This information, however, is not directly available to the banner-publishing site. While it can be obtained from the advertiser, the publishing-site administrator would presumably prefer receiving the relevant statistics from an unbiased source.

Further, since advertisers will often advertise at more than one location, both the advertisers and the publishers will typically have an interest in the statistics pertaining to the effectiveness of an individual publishing site at generating leads for the advertiser. In other words, they will be interested in knowing the percentage of the total number of "clicks" on the banner generated by each publishing site. Currently, such information is not readily available. To obtain it requires that the appropriate expertise is available, and that the server at the advertiser's Web site is appropriately configured.

3601

In view of the value of such statistics, and the relative inconvenience in obtaining such information, a need presently exists for an unbiased, readily available source of statistical/accounting information for Internet advertisers and advertising publishers.

5 **Summary of the Invention**

A system and method for providing on-line third party accounting and statistical information is disclosed. According to the invention, a banner, displayed for the purpose of enticing a first party (user) to visit a fourth party's (advertiser) Web site, is served to the user's Web browser by a second party (banner publisher). The banner is operable to download the
10 address of a third-party (accounting and statistical service) to the user's Web browser and establish a link between the user and the third party service. The third party service receives a download request signal from the user's Web browser when the link is established, and maintains a count of received request signals and a log entry containing the second party's Web site address and other information provided by the user's Web browser. The third party service redirects the
15 Web browser's download request signal to the advertiser's Web site, which serves a Web page to the user's Web browser. The method is transparent to the user; i.e., as far as the user is aware, the banner takes him directly to the advertiser's Web site.

The third party accumulates and tabulates statistical information including the number of clicks on the advertiser's banner, and further provides data indicative of the effectiveness of the
20 banner publisher's Web page as an advertising medium.

5

3601

Brief Description of the Drawings

Further features of the invention will become more apparent from the following detailed description of specific embodiments thereof when read in conjunction with the accompanying drawings, in which:

FIG. 1 shows a conventional system for advertising with a banner;

FIG. 2 is an exemplary embodiment of an on-line third party accounting and statistical system according to the present invention; and

FIG. 3 is a flow diagram of an illustrative method for implementing the system of FIG. 2.

Detailed Description of the Invention

The present invention can be implemented over a network such as the Internet. It is understood that such a network is comprised of many computers linked over telecommunication lines and communicating using various standard protocols. Servers, which are programs that provide Internet resources (e.g., a Web page), and clients, which are programs that access those resources on a user's behalf (e.g., a Web browser), are resident on such computers. Details concerning such computers and software, and the process of establishing communication links are known to those skilled in the art and will not be described herein except as appropriate for an understanding of the present invention.

Moreover, for clarity of explanation, this specification contains terminology and conventions familiar to those skilled in the art. Such terminology is often more metaphorical than literal in nature. For example, while those skilled in the art may refer to "visiting" a

3601

particular Web site, it should be appreciated that a user does not actually travel to the web site. Rather, a source file that is operable, in conjunction with the user's Web browser, to generate a Web page on a user's computer monitor is downloaded to the user's computer. Those skilled in the art are familiar with such metaphorical terminology and have an understanding of its literal
 5 implications and implementations.

FIG. 1 shows a prior art on-line system for advertising with a banner 9. As shown in FIG. 1, a user's Web browser 3 establishes a link or connection 11 with a Web site 5 of an entity displaying the banner ("banner publisher"). The banner publisher is anyone who presents advertising on behalf of an advertiser. The banner publisher will typically be a Web directory or
 10 a large service provider such as America Online, Compuserve, Prodigy and the like that offers their own information and online resources, as well as Internet access.

a Once the user is on-line, i.e., connected to the Internet through ^{*an Internet*} ~~a Internet~~ Service Provider (ISP), the link 11 to the Web site 5 is established by "entering" the address, i.e., the uniform resource locator (URL), of the Web site 5 into the Web browser 3. Once the link 11 is
 15 established, the Web browser 3 sends a download request signal 11a to the Web site 5. In response, the Web site 5 downloads information, indicated by the reference numeral 11b, to the user's Web browser 3. The downloaded information includes a Web page 7 having a banner 9. The banner 9 is an area of the Web page 7 that can be used to display logos, etc., that will hopefully entice a user reading the banner to obtain further information pertaining to the banner

20 As will be appreciated by those skilled in the art, a Web page is a hypertext file or source located on a specific computer. The hypertext source includes text as well as instructions for the

3601

user's browser as to how to display such text. The instructions are coded using a set of specifications referred to as Hypertext Markup Language (HTML).

The hypertext source contains one or more hypertext "links" that "point," i.e., provide the address, to another hypertext file. If a user wishes to "follow" the link, the user can "click" on it, such as by depressing a mouse button. The user's browser then connects to the appropriate Web site (computer), as dictated by the URL associated with the link, and sends a download request signal for a copy of the hypertext source associated with the URL. When the copy arrives, the browser displays the file in a format dictated by the HTML, generating a Web page on the user's browser. Included in the downloaded copy are the specifications of the banner 9 and associated links.

If enticed by the banner 9, the user can "click" on it, assuming the banner has a link associated with it. In the prior art, a banner typically points to the Web site 17 of the advertiser. A download request signal 19a is sent from the user's Web browser 3 to the advertiser's Web site 17. The Web site ¹⁷5 downloads information, indicated by the reference numeral 19b, to the user's Web browser 3. The downloaded information is a copy of a hypertext source file operable to generate a Web page of the advertiser.

FIG. 2 shows an exemplary embodiment of an on-line third party accounting and statistical system 1 according to the present invention. As shown in FIG. 2, the system 1 includes the elements of FIG. 1, as well as the Web site 13 of a third party accounting and statistical service, and the link created between the user's Web browser and the third party Web site 13. With the addition of the Web site 13 of the third party service, and appropriate

3601

programming, the information flow between the user and the various Web sites changes, as described below.

As described above for conventional systems, the link 11 to the Web site 5 is established by entering the URL of the Web site 5 into the Web browser 3. Once the link 11 is established, the Web browser 3 sends a download request signal 11a to the Web site 5. In response, the Web site 5 downloads information, indicated by the reference numeral 11b, to the user's Web browser 3. The downloaded information includes a copy of the requested hypertext source file operable to generate a Web page 7 having a banner 9.

As before, if the user is interested in more information about the banner 9, he may click on it. According to the present invention, the banner 9 points to the third party Web site 13 rather than the advertiser's Web site 17 as in conventional arrangements. As such, in a system according to the present invention, clicking on the banner 9 establishes a link between the user's Web browser 3 and the third party Web site 13. This is facilitated by the operation described in operation block 101 of the flow diagram of FIG. 3, which is an exemplary method according to the present invention. According to operation block 101, the hypertext file that generates the Web page 7 and the banner 9 is edited or originally coded so that the banner 9 is operable, in conjunction with the user's Web browser 3, to form a hypertext link to the third party Web site 13 when clicked upon. The aforementioned coding includes the URL pointing to the third party site 13.

If a user clicks on the banner 9 forming a link to the third party, then, as indicated in operation block 103 of FIG. 3, the third party accounting and statistical service 13 receives a

3601

download request signal 15a from the user's Web browser 3. The third party service 13 accepts the download request signal 15a and increments a counter that keeps track of the number of received request signals, as indicated in operation block 105. Additionally, the third party service 13 logs a variety of information available from the user's Web browser 3. Such information can include the origin of the user, the address of the banner publisher, and so forth. In this manner, the third party service 13 accumulates statistical information useful to the banner publisher and the advertiser.

The download request received by the third party service 13 is ultimately intended to obtain information from the advertiser. As such, the third party service 13 re-directs the received download request signal to the advertiser's Web site 17, as indicated in operation block 107. Specifically, the redirect request 15b is sent to the user's Web browser 3 from the third party Web site 13, and, from the browser, a download request 19a is sent to the advertiser's Web site 17. Once the download request signal is received by the advertiser, the advertiser's Web page is downloaded to the user's Web browser 3 as indicated by reference numeral 19b. The method is transparent from the user's point of view; he is not aware of the "detour" to the third party service 13.

In one embodiment, operation blocks 105 and 107 can be accomplished as follows. A Hypertext Transfer Protocol (HTTP) server program at the third party's site 13 is configured to issue a "302" redirect response when a specific URL is requested. Such configuration involves editing a configuration file for the HTTP server program. When the specific URL is requested, the request itself and Web browser 3 information is recorded, and the redirect to the intended

3601

URL, i.e., the advertiser's Web site, is issued. In this manner, the user is transparently redirected to the advertiser's Web site 17

It will be appreciated that an advertiser may wish to advertise at more than one location, i.e., more than one banner-publishing site. If so, the advertiser will presumably want to know, among other statistics, the effectiveness of each of the publishing sites, i.e., which site generates the most visits to the advertiser's Web site 17. Likewise, a banner-publishing site may wish to display the advertising, i.e., banner, of more than one advertiser. In a further embodiment, the present invention can tally clicks and generate statistics for multiple banner-publishing sites and multiple advertisers. This is accomplished by using multiple URLs, each pointing to different entry points at the third party Web site 13. The third party Web site, more properly its server, accepts the incoming URLs, accumulates statistics, and redirects each user's Web browser 3 to the intended (advertiser's) Web site in the manner previously described. Thus, clicks originating from different publishing sites, as well as those intended for different advertisers, are each directed to different entry points at the third party Web site 13. Assigning multiple URLs for this purpose is illustrated by the example below.

For the present example, there are two banner publishers, "Pub A" and "Pub B" and three advertisers "Ban 1," "Ban 2" and "Ban 3." Advertisers Ban 1 and Ban 2 have their banners displayed at both publishers' Web sites. Advertiser Ban 3 displays its banner only with Pub A. Exemplary URLs for the five banners are as follows.

3601

	<u>Banner</u>		
	<u>Publisher</u>	<u>Advertiser</u>	<u>URL</u>
5	Pub A	Ban 1	http://www genesis.com/pubA/ban1
	Pub A	Ban 2	http://www.genesis.com/pubA/ban2
	Pub A	Ban 3	http://www.genesis.com/pubA/ban3
	Pub B	Ban 1	http://www genesis.com/pubB/ban1
	Pub B	Ban 2	http://www.genesis.com/pubB/ban2

10

Thus, while advertiser Ban 1's banner at publisher A points to entry point "puba/ban1" at the third party Web site 13, Ban 1's banner at publisher B points to entry point "pubb/ban1." In this manner, the present invention can handle multiple banner publishers and multiple advertisers.

15

As appropriate, the third party accounting and statistical service 13 can provide a report to the advertiser and/or the banner publisher. The report may include statistics such as, for example, the number of clicks on the banner 5, the percentage of clicks that result from the banner 5 being displayed on a particular banner publisher's Web page if the total number of impressions is known, the number of clicks on the banner per day, the date and time of each click, the origin of the user and so forth. Additionally, the report may include correlations

20

developed from such statistics and illustrative charts and graphs. Typically, such a report would be provided on a regular basis.

While the present invention finds particular utility for use in conjunction with the Internet, and, more specifically, the World Wide Web (WWW), it can be applicable to other

3601

suitably-configured networks, as well. Thus, in a more generally applicable embodiment, the present invention provides a system and a method for third party accounting on a network consisting of a plurality of nodes, wherein a user at a first node views a first quantity of information provided by a second node (publisher) for the benefit of a fourth node (advertiser).

5 Although specific embodiments of this invention have been shown and described herein, it is to be understood that these embodiments are merely illustrative of the many possible specific arrangements and methods that can be devised in application of the principles of the invention. Numerous and varied other arrangements and methods can be devised in accordance with these principles by those of ordinary skill in the art without departing from the scope and spirit of the
10 invention.

3601

I claim:

1. A method for on-line third party accounting, wherein a publisher having a first Web site publishes advertising for an advertiser having a second Web site, the method comprising the steps of
 - (A) receiving, at a third party Web site, a download request signal from a user's Web browser, which signal is ultimately intended for the advertiser's Web site;
 - (B) incrementing a counter, at the third party Web site, in response to receiving the download request signal and logging information available from the Web browser; and
 - (C) redirecting the download request signal to the advertiser's Web site.
2. The method of claim 1 wherein the advertising is a banner capable of forming a hypertext link to the third party Web site, and further comprising the step of associating, with the banner, coding operable to form the hypertext link.
3. The method of claim 1 wherein step (B) further comprises logging at least one of either the origin of the user and the address of the banner publisher.
4. The method of claim 1, further comprising the step of preparing a report for one or both of the advertiser and the publisher, the report comprising the number of download request signals counted in step (B).

3601

5. The method of claim 1 wherein step (C) further comprises configuring a Hypertext Transfer Protocol server program at the third party's Web site to issue a 302 redirect response when a specific Uniform Resource Locator is requested.

6. The method of claim 5 wherein step (C) further comprises editing a configuration file for the HTTP server program.

7. A method for third party accounting on a network, the network consisting of a plurality of nodes, wherein a user at a first node views a first quantity of information provided by a second node for the benefit of a fourth node, the method comprising the steps of:

- Sub
a
- (A) receiving, at a third node, a signal from the first node, which signal is ultimately intended for the fourth node;
 - (B) incrementing a counter in response to receiving the signal; and
 - (C) redirecting the signal through the first node to the fourth node.

8. The method of claim 7 wherein step (A) further comprises receiving a download request signal.

9. An on-line third party accounting system for counting the number of times that any one of a plurality of users, each using a Web browser to view a banner on a Web page, click

3601

on the banner to obtain additional information, wherein the banner is displayed by a first party for the benefit of a second party, the system comprising:

a communications link established between the Web browser of at least one user of the plurality clicking on the banner and a third party computer, the link established when the user clicks on the banner;

the third party computer, which computer is programmed to count download request signals received from the Web browser of the at least one user when the user clicks on the banner, each download request signal corresponding to a click on the banner, the third party computer further programmed to send a redirect signal to the Web browser of the at least one user; wherein,

once the redirect signal is received by the Web browser, a communications link is established between the Web browser and a computer of the second party, and a signal is sent to the second party computer, which second party computer responds by downloading said additional information to the Web browser.

FIG. 3

08/729188

IN THE UNITED STATES
PATENT AND TRADEMARK OFFICE

PATENT APPLICATION

INVENTOR(S) Daniel D. Wexler

CASE 3601

TITLE THIRD-PARTY ON LINE ACCOUNTING SYSTEM AND METHOD THEREFOR

THE COMMISSIONER OF PATENTS AND TRADEMARKS
BOX PATENT APPLICATION
WASHINGTON, D.C. 20231

SIR:

Enclosed are the following papers relating to the above-named application for patent:

- 15 Pages of Specification (including 3 pages of claims)
- 1 Page of Abstract
- 2 Sheets of drawing(s)
- Declaration and Power of Attorney
- Verified Statement Claiming Small Entity Status
- Return Postcard

This filing is by a small entity. A verified statement under 37 CFR 1.9(f) & 1.27(b) is attached.

	CLAIMS AS FILED		RATE	CALCULATIONS
	<u>NO. FILED</u>	<u>NO. EXTRA</u>		
Total Claims	9 - 20 =	0	x \$11 =	\$ -0-
Independent Claims	3 - 3 =	0	x \$40 =	\$ -0-
Multiple Dependent Claim(s), if applicable			\$130 =	\$ -0-
Basic Fee				\$ 385.00
			<u>TOTAL FEE:</u>	<u>\$ 385.00</u>

3601

- 2 -

Please file the application. A check in the amount of \$385.00 is enclosed to cover the filing fee.

Please address all correspondence to: **Wayne S. Breyer, LAW OFFICES OF WAYNE S. BREYER, 35 Malus Lane, Middletown, N.J. 07748.** Telephone calls should be made to Wayne S. Breyer at (908) 706-3497.

Respectfully,

LAW OFFICES OF WAYNE S. BREYER

 This is a communication from the examiner in charge of your application.
COMMISSIONER OF PATENTS AND TRADEMARKS
OFFICE ACTION SUMMARY
☒ ~~THE APPLICATION~~ Responsive to communication(s) filed on 10/11/96
☐ This action is FINAL.

☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 D.C. 11; 453 O.G. 213.

 A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).
Disposition of Claims
☒ Claim(s) 1-9 is/are pending in the application.

Of the above, claim(s) _____ is/are withdrawn from consideration.

☐ Claim(s) _____ is/are allowed.

☒ Claim(s) 1-9 is/are rejected.

☐ Claim(s) _____ is/are objected to.

☐ Claims _____ are subject to restriction or election requirement.
Application Papers
☒ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on _____ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on _____ is ☐ approved ☐ disapproved.

☐ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.
Priority under 35 U.S.C. § 119
☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☐ All ☐ Some* ☐ None of the CERTIFIED copies of the priority documents have been

☐ received.

☐ received in Application No. (Series Code/Serial Number) _____.

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

*Certified copies not received: _____

☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).
Attachment(s)
☒ Notice of Reference Cited, PTO-892

☐ Information Disclosure Statement(s), PTO-1449, Paper No(s). _____

☐ Interview Summary, PTO-413

☒ Notice of Draftsperson's Patent Drawing Review, PTO-948

☐ Notice of Informal Patent Application, PTO-152
-- SEE OFFICE ACTION ON THE FOLLOWING PAGES --

Serial Number: 08/729,188

Page 2

Art Unit: 2764

1. This application has been examined. Claims 1-9 are pending.
2. The disclosure is objected to because of the following informalities: page 5 line 9, the reference to "FIG. 1" (the prior art) should instead be to "FIG. 2" (showing the instant invention); and page 7 line 14, "Web site 5" should instead be "Web site 17". Appropriate correction is required.
3. Claims 3, 5 and 9 are objected to as failing to particularly point out and distinctly claim the subject matter which applicant regards as his invention. See 37 C.F.R. § 1.75(a) and M.P.E.P. § 608.01(I).

The examiner has made several assumptions at this point of the examination, especially as it relates to antecedent basis, that will be clear from reading the paragraphs concerning claim objections below. These assumptions concern the examiner's suggestions of alternative claim language which appear to add a clearer understanding to the claims. These assumptions are carried through the remainder of the examination of the claimed limitations. Applicant should inform the examiner in any response to this office action if any of these assumptions are incorrect and make appropriate changes to the claims.

Correction of the following is required:

A. Claim 3 states that it is dependent on claim 1 when it is believed that applicant intended this claim to be dependent on claim 2; this supposition is further supported by the phrase "the banner publisher" in line 2 of claim 3 when no "banner" is introduced until claim 2 (note, however that "the banner publisher" still does not have proper antecedent basis in either claim 1 or in claim 2).

B. Claim 5 line 2, the acronym "(HTTP)" should be added after "Hypertext Transfer Protocol" and before "server" since claim 6 references "the HTTP server".

Serial Number: 08/729,188

Page 3

Art Unit: 2764

C. Claim 9 lines 6 and 9 each mention “the user” when “the at least one user” has already been used, and has established proper antecedent basis.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

5. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by any single one of the following:

a) Graber et al. (US 5,712,979) (see at least the abstract, column 5 line 25 to column 7 line 15, and column 10 line 45 to column 15 line 55, particularly the discussions concerning the “co-marketer”, “redirecting”, and “bounty payment”);

b) Graber et al. (US 5,717,860) (see at least the abstract, column 5 line 24 to column 7 line 14, and column 10 line 38 to column 15 line 21, particularly the discussions concerning the “co-marketer”, “redirecting”, and “bounty payment”); or

c) Kirsch (see at least the abstract and the remainder of the document, with particular attention being drawn to the “redirecting” operation and the “accounting data” logged).

Referring to the claims, each of the references discloses a third-party which logs specific data concerning the path which a user took to get to that location, and a redirection operation which sends the user to their preferred location based on the advertisement which they “clicked” in the first place.

Serial Number: 08/729,188

Page 4

Art Unit: 2764

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The cited but not applied references disclose various network based tracking systems. Particular attention should be drawn to the non-patent literature concerning the products I/PRO and I/COUNT ("Research Firms Strive for Web Tracking That Counts") and the product Lilypad ("Streams Readies Release of Breakthrough Internet Media Planning and Assessment").

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Stamber whose telephone number is (703) 305-8469. The examiner can normally be reached Monday-Thursday from 6:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Todd Voeltz, can be reached at (703) 305-9714.

The fax number for Formal or Official faxes to the Electrical Cluster is (703) 308-9051 or 9052. Draft or Informal faxes for this Art Unit can be submitted to (703) 308-5357.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

U.S. DEPARTMENT OF COMMERCE - Patent and Trademark Office

Application No.

729188

NOTICE OF DRAFTSPERSON'S PATENT DRAWING REVIEW

Draftpersons review all originally filed drawings regardless of whether they are designated as formal or informal. Additionally, patent Examiners will review the drawings for compliance with the regulations. Direct telephone inquiries concerning this review to the Drawing Review Branch, 703-305-8404.

The drawings filed (insert date) 10/11/96 are
 A ☐ not objected to by the Draftsperson under 37 CFR 1.84 or 1.152.
 B ☒ objected to by the Draftsperson under 37 CFR 1.84 or 1.152 as indicated below. The Examiner will require submission of new, corrected drawings when necessary. Corrected drawings must be submitted according to the instructions on the back of this Notice

1. DRAWINGS. 37 CFR 1.84(a) Acceptable categories of drawings:

- Black ink Color.
☐ Not black solid lines. Fig(s) _____
☐ Color drawings are not acceptable until petition is granted.
 Fig(s) _____

2. PHOTOGRAPHS. 37 CFR 1.84(b)

- ☐ Photographs are not acceptable until petition is granted.
 Fig(s) _____
☐ Photographs not properly mounted (must use bristol board or photographic double-weight paper). Fig(s) _____
☐ Poor quality (half-tone) Fig(s) _____

3. GRAPHIC FORMS. 37 CFR 1.84(d)

- ☐ Chemical or mathematical formula not labeled as separate figure.
 Fig(s) _____
☐ Group of waveforms not presented as a single figure, using common vertical axis with time extending along horizontal axis.
 Fig(s) _____
☐ Individual waveform not identified with a separate letter designation adjacent to the vertical axis. Fig(s) _____

4. TYPE OF PAPER. 37 CFR 1.84(c)

- ☐ Paper not flexible, strong, white, smooth, nonshiny, and durable.
 Sheet(s) _____
☐ Erasures, alterations, overwritings, interlineations, cracks, creases, and folds copy machine marks not accepted. Fig(s) _____
☐ Mylar, velum paper is not acceptable (too thin). Fig(s) _____

5. SIZE OF PAPER. 37 CFR 1.84(f) Acceptable sizes:

- 21.6 cm. by 35.6 cm. (8 1/2 by 14 inches)
 21.6 cm. by 33.1 cm. (8 1/2 by 13 inches)
 21.6 cm. by 27.9 cm. (8 1/2 by 11 inches)
 21.0 cm. by 29.7 cm. (DIN size A4)

- ☐ All drawing sheets not the same size Sheet(s) _____
☐ Drawing sheet not an acceptable size Sheet(s) _____

6. MARGINS 37 CFR 1.84(g) Acceptable margins:

Paper size

21.6 cm X 35.6 cm (8 1/2 X 14 inches)	21.6 cm X 33.1 cm (8 1/2 X 13 inches)	21.6 cm X 27.9 cm (8 1/2 X 11 inches)	21.0 cm X 29.7 cm (DIN Size A4)
1.9 cm (3/4")	2.5 cm (1")	2.5 cm (1")	2.5 cm
1.6 cm (5/16")	6.4 cm (1/4")	6.4 cm (1/4")	2.5 cm
1.6 cm (1/4")	6.4 cm (1/4")	6.4 cm (1/4")	1.5 cm
1.6 cm (1/4")	6.4 cm (1/4")	6.4 cm (1/4")	1.0 cm

*Margins do not conform to chart above

Sheet(s) _____

☐ Top (T) ☐ Left (L) ☐ Right (R) ☐ Bottom (B)

7. VIEWS 37 CFR 1.84(h)

REMINDER: Specification may require revision to correspond to drawing changes.

- ☐ All views not grouped together. Fig(s) _____
☐ Views connected by projection lines or lead lines.
 Fig(s) _____
☐ Partial views. 37 CFR 1.84(h) 2

☐ View and enlarged view not labeled separately or properly
 Fig(s) _____

☐ Sectional views. 37 CFR 1.84 (h) 3

☐ Hatching not indicated for sectional portions of an object.
 Fig(s) _____

☐ Cross section not drawn same as view with parts in cross section with regularly spaced parallel oblique strokes. Fig(s) _____

8. ARRANGEMENT OF VIEWS 37 CFR 1.84(i)

☐ Words do not appear on a horizontal, left-to-right fashion when page is either upright or turned so that the top becomes the right side, except for graphs. Fig(s) _____

9. SCALE. 37 CFR 1.84(k)

☐ Scale not large enough to show mechanism with crowding when drawing is reduced in size to two-thirds in reproduction
 Fig(s) _____
☐ Indication such as "actual size" or scale 1/2" not permitted
 Fig(s) _____

10. CHARACTER OF LINES, NUMBERS, & LETTERS. 37 CFR 1.84(j)

☒ Lines, numbers & letters not uniformly thick and well defined, clean, durable, and black (except for color drawings)
 Fig(s) 1-3

11. SHADING. 37 CFR 1.84(m)

☐ Solid black shading areas not permitted
 Fig(s) _____
☐ Shade lines, pale, rough and blurred. Fig(s) _____

12. NUMBERS, LETTERS, & REFERENCE CHARACTERS. 37 CFR 1.84(p)

☒ Numbers and reference characters not plain and legible 37 CFR 1.84(p)(1) Fig(s) 1-3
☐ Numbers and reference characters not oriented in same direction as the view. 37 CFR 1.84(p)(1) Fig(s) _____
☐ English alphabet not used. 37 CFR 1.84(p)(2) Fig(s) _____
☐ Numbers, letters, and reference characters do not measure at least .32 cm (1/8 inch) in height. 37 CFR(p)(3) Fig(s) _____

13. LEAD LINES 37 CFR 1.84(q)

☐ Lead lines cross each other. Fig(s) _____
☐ Lead lines missing. Fig(s) _____

14. NUMBERING OF SHEETS OF DRAWINGS. 37 CFR 1.84(t)

☐ Sheets not numbered consecutively, and in Arabic numerals, beginning with number 1 Sheet(s) _____

15. NUMBER OF VIEWS 37 CFR 1.84(u)

☐ Views not numbered consecutively, and in Arabic numerals, beginning with number 1 Fig(s) _____
☐ View numbers not preceded by the abbreviation Fig Fig(s) _____

16. CORRECTIONS 37 CFR 1.84(w)

☐ Corrections not made from prior PTO-548.
 Fig(s) _____

17. DESIGN DRAWING 37 CFR 1.152

☐ Surface shading shown not appropriate Fig(s) _____
☐ Solid black shading not used for color contrast
 Fig(s) _____

AMENDMENT

In response to the Office action of July 13, 1998, please amend the above-identified application as follows:

IN THE SPECIFICATION

- Page 5, line 9, change "FIG. 1" to --FIG. 2--;
- Page 6, line 12, change "a Internet" to --an Internet--; and
- Page 7, line 14, change "Web site 5" to --Web site 17--.

IN THE CLAIMS

Amend claim 1:

1 ~~1. (Amended) A method for [on-line third party] accounting, wherein a first publisher having a~~
2 ~~first Web site and a second publisher having a second Web site each publish[es] advertising for an~~
3 ~~advertiser having a [second] third Web site, the method comprising [the steps of]:~~
4 ~~[(A)] receiving, at a [third party] fourth Web site, a first uniform resource locator [request~~
5 ~~signal] from a first user's Web browser, [which download signal] wherein the first uniform resource~~
6 ~~locator is [ultimately intended for the advertiser's Web site] obtained by the first user's Web browser~~
7 ~~from the first Web site where the first uniform resource locator is associated with advertising for the~~
8 ~~advertiser;~~

a
sub

A

Serial No. 08/729,188

D.D. Wexler 1

9 ~~[(B)] [incrementing a counter] logging, at the fourth Web site, the receipt of the first uniform~~
 10 ~~resource locator [at the third party Web site], in response to [receiving] the receipt of the first uniform~~
 11 ~~resource locator [download request signal and logging information available from the Web browser];~~
 12 ~~[and]~~

13 ~~[(C)] redirecting [the download request signal] , at the fourth Web site, the first user's Web~~
 14 ~~browser to the [advertiser's] third Web site in response to the receipt of the first download request~~
 15 ~~signal[.];~~

16 ~~receiving, at the fourth Web site, a second uniform resource locator from a second user's Web~~
 17 ~~browser, wherein the second uniform resource locator is obtained by the second user's Web browser~~
 18 ~~from the second Web site where the second uniform resource locator is associated with advertising~~
 19 ~~for the advertiser;~~

20 ~~logging, at the fourth Web site, the receipt of the second uniform resource locator in response~~
 21 ~~to receiving the second download request signal; and~~

22 ~~redirecting, at the fourth Web site, the second user's Web browser to the third Web site in~~
 23 ~~response to the receipt of the second download request signal.~~

1 2. (Amended) The method of claim 1 wherein the advertising published by the first publisher is a
 2 first banner [capable of forming a hypertext link] that is associated with the first uniform resource locator
 3 [to the third party Web site], and the advertising published by the second publisher is a second banner that
 4 is associated with the second uniform resource locator. [and further comprising the step of associating ,
 5 with the banner, coding operable to form the hypertext link.]

6 3. (Amended) The method of claim 1 [wherein step (B)] further [comprises] comprising logging
 7 at least one of either [the origin] an indicium of the identity of the first user and [the address] an indicium
 8 of the identity of the [banner] first publisher.

9 4. (Amended) The method of claim 1, further comprising [the step of] preparing a report for one
 10 or both of the advertiser and the first publisher, the report comprising [the number] each receipt of the
 11 first [download request signals counted in step (B)] uniform resource locator by the fourth Web site.

12 5. (Amended) The method of claim 1 [wherein step (C) further comprises] further comprising
 13 configuring a Hypertext Transfer Protocol server program at the [third party's] fourth Web site to issue a
 14 302 redirect response when [a specific Uniform Resource Locator is requested] the first uniform resource
 15 locator is received.

Serial No. 08/729,188

D.D. Wexler 1

1 6. (Amended) The method of claim 5 [wherein step (C) further comprises] further comprising
 2 editing a configuration file for the [HTTP] Hypertext Transfer Protocol server program.

1 ~~7. (Amended) A method for third party accounting on a network [, the network consisting of]~~
 2 ~~that comprises a plurality of nodes, wherein a [user at a first node views a first quantity of information~~
 3 ~~provided by a second node for the benefit of a fourth fifth node,] first node and a second node each~~
 4 ~~publish advertising for a third node. the method comprising [the steps of]:~~

5 ~~[(A)] receiving, at a [third] fourth node, a first download request signal from [the first] a fifth~~
 6 ~~node, which first request download signal is [ultimately intended for the fourth node]~~
 7 ~~received by the fifth node from the first node;~~

8 ~~[(B) incrementing a counter in response to receiving the signal] logging, at the fourth node, the~~
 9 ~~receipt of the first download signal; [and]~~

10 ~~[(C) redirecting the signal through the first node to the fourth node] transmitting from the fourth~~
 11 ~~node a second request download signal to the fifth node, which second download request~~
 12 ~~signal directs the fifth node towards the third node;~~

13 ~~receiving, at the fourth node, a third download request signal from a sixth node, which third~~
 14 ~~download request signal is received by the sixth node from the second node;~~

15 ~~logging, at the fourth node, the receipt of the third download request signal; and~~

16 ~~transmitting from the fourth node a fourth download request signal to the sixth node, which fourth~~
 17 ~~download request signal directs the sixth node to the third node.~~

1 8. (Amended) The method of claim 7 wherein [step (A) further comprises receiving a download
 2 request signal.] the advertising published by the first node for the third node is a first banner that is
 3 associated with the first download request signal and the advertising published by the second node for the
 4 third node is a second banner that is associated with the second download request signal.

1 9. (Amended) [An on-line third party accounting system for counting the number of times that
 2 any one of a plurality of users, each using a Web browser to view a banner on a Web page, click on the
 3 banner to obtain additional information, wherein the banner is displayed by a first party for the benefit of
 4 a second party, the system comprising:

5 a communications link established between the Web browser of at least one user of the plurality
 6 clicking on the banner and a third party computer, the link established when the user clicks on the banner;

7 the third party computer, which computer is programmed to count download request signals
 8 received from the Web browser of the at least one user when the user clicks on the banner, each download

Serial No. 08/729,188

D.D. Wexler 1

request signal corresponding to a click on the banner, the third party computer further programmed to send a redirect signal to the Web browser of the at least one user; wherein, once the redirect signal is received by the Web browser, a communications link is established between the Web browser and a computer of the second party, and a signal is sent to the second party computer, which second party computer responds by downloading said additional information to the Web browser.]

A method comprising:

receiving a first uniform resource locator from a first browser, wherein the first uniform resource locator is obtained by the first browser from a first Web site that publishes advertising for an advertiser;

logging, in response to the receipt of the first uniform resource locator, the receipt of the first uniform resource locator;

transmitting, in response to the receipt of the first uniform resource locator, a second uniform resource locator to the first browser, wherein the second uniform resource locator is associated with a second Web site that is associated with the advertiser;

receiving a third uniform resource locator from a second browser, wherein the third uniform resource locator is obtained by the second browser from a third Web site that publishes advertising for the advertiser;

logging, in response to the receipt of the third uniform resource locator, the receipt of the third uniform resource locator; and

transmitting a fourth uniform resource locator to the second browser, wherein the fourth uniform resource locator is associated with the second Web site.

10. (Add) The method of claim 9 wherein the first uniform resource locator is uniquely associated with the first Web site and the second Web site, and wherein the third uniform resource locator is uniquely associated with the second Web site and the third Web site.

11. (Add) The method of claim 9 wherein the first uniform resource locator is associated with a first banner that is published by the first Web site and that is advertising for the advertiser and wherein the third uniform resource locator is associated with a second banner that is published by the third Web site and that is also advertising for the advertiser.

REMARKS

The specification has been amended to correct inadvertent typographical errors.

Serial No. 08/729,188

D.D. Wexler 1

Claims 1-9 were examined and rejected under 35 U.S.C. 103. Claims 1-9 have been amended to clarify the distinction between the present invention and the prior art and claims 10 and 11 have been added. Therefore, reconsideration is respectfully requested in light of the above amendments and the following remarks.

Objection to the Disclosure

The Office action objected to the disclosure because of the following informalities:

1. At page 5, line 9, the reference to "FIG. 1" should instead have been to "FIG. 2." The specification has been amended accordingly.
2. At page 7, line 14, the phrase "Web site 5" should be "Web site 17." The specification has been amended accordingly.

The applicant wishes to thank Examiner Stamber for his careful proofreading of the specification.

Objection to Claims 3, 5 and 9

The Office action objected to claims 3, 5, and 9 under 37 C.F.R. 1.75(a) and MPEP 608.01(i). In particular:

Claim 3 has been objected to because language in the claim could be read to suggest that it should be dependent on claim 2, when, in fact, it is dependent on claim 1. The claim has been amended to eliminate any ambiguity.

In Claim 5, the acronym "HTTP" was objected to and has been replaced with "Hypertext Transfer Protocol."

In Claim 9, each mention of "the user" after "the at least one user" confuses the issue of proper antecedent basis. Claim 9 has been amended so as to make this objection moot.

35 U.S.C. 102 Rejection of Claims 1-9

Claims 1-9 were rejected under 35 U.S.C. 102(e) as being anticipated by any one of the following three references:

1. T.E. Graber et al., U.S. Patent 5,712,979, issued Jan. 27, 1998 (hereinafter "**Graber I**");
2. T.E. Graber et al., U.S. Patent 5,717,860, issued Feb. 10, 1998 (hereinafter "**Graber II**"); and
3. S.T. Kirsch, U.S. Patent 5,751,956, issued May 12, 1998 (hereinafter "**Kirsch**").

After studying the references, the claims have been amended to clarify the distinction between the present invention and the prior art. In light of these amendments, however, the applicant respectfully submits that the claims are now allowable.

Serial No. 08/729,188

D.D. Wexler 1

Independent claims 1, 7 and 9, as amended, now recite, a node or Web site in a network that is involved in the interplay of signals being transmitted among a plurality of nodes on a network. For example, in claim 1, the interplay is between:

- a first publisher (*e.g.*, Yahoo, Infoseek, *etc.*) having a Web site;
- a second publisher (*e.g.*, Excite, HotBot, *etc.*) having a Web site;
- an advertiser (*e.g.*, Amazon.com, Sears, Ebay.com, *etc.*) having a Web site,
- a first user who is attracted to the advertiser's Web site by advertising on the first publisher's Web site,
- a second user who is attracted to the advertiser's Web site by advertising on the second publisher's Web site, and
- a fourth Web site (*i.e.*, the claimed invention) that is capable of keeping track of which publisher's web site is responsible for referring each user to the advertiser's Web site.

In other words, when there are multiple publisher's who publish advertising for an advertiser, the present invention is ideal for tracking which publisher's Web site is responsible for referring each user to the advertiser's Web site. This is neither taught nor suggested by any of the references, alone or in combination.

Furthermore, the present invention, as recited in the claims, has other characteristics that give it advantages over the prior art.

First, the present invention enables one site to perform the accounting for multiple publishers. This is advantageous because the cost of the system can be amortized over more than one publisher and because it enables an advertiser to get all of its statistics from a single source.

Second, the present invention enables the accounting site to be owned and operated by an independent entity — one that is not associated with either the publisher or the advertiser. A disadvantage with Internet accounting systems in the prior art is that the accounting is performed by either the publisher or by the advertiser. And because the amount of money paid by the advertiser to the publisher is dependent on the accounting statistics collected, there is, or is perceived to be, the temptation by the one doing the accounting to bias the statistics in its favor. In other words, advertisers don't completely trust publishers to be honest and publishers don't completely trust advertisers either.

The situation is analogous to that in television advertising. Because television advertising fees are based on ratings, television stations don't trust advertisers to tally the ratings and advertisers don't trust television stations. Therefore, the need existed for an independent entity to tally television ratings, which has been filled by the well-known A.C. Nielson Company.

Serial No. 08/729,188

D.D. Wexler 1

In the same way that television advertising needed an independent entity to tally ratings, the Internet needs an independent entity to account for the referrals from publishers to advertisers. The present invention enables that independent entity.

Third, the present invention can be used with, but does not require, "overloaded" URLs like Kirsch or specialized software like Kirsch, Graber I, and Graber II. Instead, the present invention is a vastly more elegant solution to the problems addressed by Kirsch, Graber I, and Graber II. Remarkably, the appropriate choice of domain names and appended path names provides the present invention with enough information to both: (i) collect the appropriate accounting statistics, and (ii) redirect the incoming URLs to the appropriate advertiser's site. This is significant because it means that an accounting system in accordance with the present invention can be constructed *and* operated for a fraction of the cost of a system like that of Kirsch, Graber I, or Graber II.

Fourth, with comparison to Kirsch, Kirsch uses "overloaded" URLs which can cause infinite re-direction loops. (Kirsch Co. 9, lines 48-50). Because the present invention does not require overloaded URLs, the present invention does not have this potential problem.

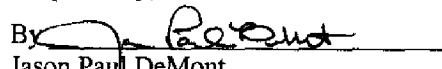

Therefore, because the independent claims, claims 1, 7 and 9, recite the interplay between multiple publishers, an advertiser, and an independent accounting Web site, the applicant respectfully submits that the claims, as amended, overcome the rejection and are now allowable.

Because claims 2-6, 8 and 10-11 are dependent on either claim 1 or 7 or 9, the applicants respectfully submit that they too are allowable.

Request for Reconsideration Pursuant to 37 C.F.R. 111

Having responded to each and every ground for objection and rejection in the Office action mailed July 13, 1998, applicants request reconsideration of the instant application pursuant to 37 CFR 1.111 and request that the Examiner allow claims 1-11 and pass the application to issue.

Respectfully,

By 
 Jason Paul DeMont
 Attorney for Applicant

-- SEE OFFICE ACTION ON THE FOLLOWING PAGES --

Serial Number: 08/729,188

Page 2

Art Unit: 2765

1. This action is responsive to the amendment filed 11/13/98. As per applicants request, claims 1-9 have been amended and newly introduced claims 10 and 11 have been entered. Claims 1-11 remain pending.
2. Applicant has corrected various inconsistencies previously noted in the disclosure, therefore the objection to the disclosure for informalities is withdrawn.
3. Claim 7 is objected to as failing to particularly point out and distinctly claim the subject matter which applicant regards as his invention. See 37 C.F.R. § 1.75(a) and M.P.E.P. § 608.01(I).

The examiner has made several assumptions at this point of the examination, especially as it relates to antecedent basis, that will be clear from reading the paragraphs concerning claim objections below. These assumptions concern the examiner's suggestions of alternative claim language which appear to add a clearer understanding to the claims. These assumptions are carried through the remainder of the examination of the claimed limitations. Applicant should inform the examiner in any response to this office action if any of these assumptions are incorrect and make appropriate changes to the claims.

Correction of the following is required:

Claim 7 line 6 mentions "first request download signal" when "first download request signal" is more accurate and has been previously used. Line 9 mentions "the first download signal" when "the first download request signal" would be better. Line 11 mentions "second request download signal" when "second download request signal" is more accurate.

Serial Number: 08/729,188

Page 3

Art Unit: 2765

4. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. Claim 1 lines 14-15 mention "the first download request signal" when none has been previously discussed, thus not only lacking proper antecedent basis in the claim but also being confusing as the item is mentioned in such a way as to lead one to believe that it either should have been mentioned before or was mentioned before, but using different terminology. Lines 21 and 23 each mention "the second download request signal" when none was previously discussed, thus not only lacking proper antecedent basis in the claim but also being confusing as the item is mentioned in such a way as to lead one to believe that it either should have been mentioned before or was mentioned before, but using different terminology.

B. Claims 2-6 are rejected as being dependent on claim 1 discussed above.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

6. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by any single one of the following:

a) Graber et al. (US 5,712,979) (see at least the abstract, column 5 line 25 to column 7 line 15, and column 10 line 45 to column 15 line 55, particularly the discussions concerning the "co-marketer", "redirecting", and "bounty payment");

WTS000055

Serial Number: 08/729,188

Page 4

Art Unit: 2765

b) Graber et al. (US 5,717,860) (see at least the abstract, column 5 line 24 to column 7 line 14, and column 10 line 38 to column 15 line 21, particularly the discussions concerning the "co-marketer", "redirecting", and "bounty payment");

c) Kirsch (see at least the abstract and the remainder of the document, with particular attention being drawn to the "redirecting" operation and the "accounting data" logged); or

d) Graber et al. (US 5,812,769) (see at least the abstract, column 5 line 25 to column 7 line 15, and column 10 line 39 to column 14 line 44, particularly the discussions concerning the "co-marketer", "redirecting", and "bounty payment").

Referring to the claims, each of the references discloses a third-party which logs specific data concerning the path which a user took to get to that location, and a redirection operation which sends the user to their preferred location based on the advertisement which they "clicked" in the first place. Note, the "publisher", "Web site", and "advertiser" language of the claims does not contribute a patentable distinction over the prior art since these items are inherent in the World Wide Web.

7. Applicant's arguments filed 11/13/98 have been fully considered but they are not persuasive.

As per the rejections under 35 USC 102(e) as being clearly anticipated by any of the, now, three separate Graber et al. references or the single Kirsch reference, the rejections are maintained and the new Graber et al. reference is included and all reference rejections are extended to cover the newly introduced claims 10 and 11, as applicant's arguments are not persuasive.

Applicant, at the top of page 6, goes through a lengthy example of the underlying method using real world examples of the various Web sites, publishers and advertisers, however the examiner submits that this example, and the claim limitations to which it corresponds, are clearly disclosed by each of the references in just the abstract of each reference:

Serial Number: 08/729,188

Page 5

Art Unit: 2765

a) Graber et al. (US 5,712,979):

"A method and apparatus for tracking the navigation path of a user that has been directed to a second site on the WWW from a first site on the WWW. A URL is received at the second WWW site when the user is directed from the first site to the second site. At the second WWW site, information representative of an identity of the first WWW site is captured by identifying a first code in the URL. A destination web page is determined for the user, and a revised destination web page is formed by attaching a second code representative of the identity of the first WWW site into at least one selected web page link associated with the destination web page. The revised destination web page is then transmitted to the user."

b) Graber et al. (US 5,717,860):

"A method and apparatus for tracking the navigation path of a user that has been directed to a second site on the World Wide Web (WWW) from a first site on the WWW. The first site has a universal resource locator (URL) symbol for uniquely identifying an address of the first site on the WWW, and the second site has a URL symbol for uniquely identifying an address of the second site on the WWW. A composite URL symbol is received at the second WWW site when the user is directed from the first site to the second site. The composite URL symbol has a first portion corresponding to the URL symbol of the second site, and a second portion that includes information corresponding to the identity of the first site. Information representative of the identity of the first WWW site is captured at the second WWW site from the second portion of the composite URL. The identity of the first WWW site is then determined at the second WWW site by comparing information from the second portion of the composite URL to a table having a plurality of entries each of which is representative of a known WWW site."

c) Kirsch:

"A Web server computer system provides for server based controlled management over a client reference to a resource locator independently selected by a client computer system and

Serial Number: 08/729,188

Page 6

Art Unit: 2765

referencing a server external Web server. The Web server system provides a client system with a predetermined URL reference to the Web server system encoded with predetermined redirection and accounting data including a reference to a second server system. On receipt by the first Web server system of the predetermined URL reference from the client system, the predetermined redirection and accounting data is decoded from the predetermined URL and processed by the Web server system to provide the client system with a redirection message including the reference to the second server system. The accounting data is processed by the Web server system and resulting data is selectively stored by the Web server system."

d) Graber et al. (US 5,812,769):

"A method and apparatus for redirecting a user from a first location on the WWW to a second location on the WWW, wherein relative URL addressing is used during the redirecting process. A signal is received from the first location indicating that the user wishes to move from the first location on the WWW to the second location on said WWW. In response to the signal, a current URL representing an address of the first location on the WWW and a destination URL portion representative of an address of the second location on the WWW are passed to a redirecting means. The current URL includes first and second portions. A destination URL is formed with redirecting means by substituting the destination URL portion in place of the second portion in the current URL, wherein the destination URL represents a relative address of the second location on the WWW. The user is then moved from the first location on the WWW to the second location on the WWW in accordance with the destination URL formed by the redirecting means."

It is clear from at least these abstracts and the other referenced portions of each individual reference that applicant's claimed limitations are met by the references.

Applicant next argues, on the remainder of page 6 through 7, that the present invention has other characteristic advantages over the prior art.

Serial Number: 08/729,188

Page 7

Art Unit: 2765

The first being that "the present invention enables one site to perform the accounting for multiple publishers.", however the "redirecting" site of each of the references clearly performs this same function.

The second being that "the present invention enables the accounting site to be owned and operated by an independent entity -- one that is not associated with either the publisher or the advertiser.", however the examiner submits that the "redirecting site" of the references is an independent entity. Reference is made to a "co-marketer", however this is only because they have the Web site URL on their page. Nevertheless, this argument is moot since the claimed limitations do not reflect such an argument.

The third being that "the present invention can be used with, but does not require, 'overloaded' URLs like Kirsch or specialized software like Kirsch, Graber I, and Graber II.", however this argument is not readily understood as the "redirecting" operation of either Kirsch or any of the Graber et al. references acts to record accounting data, and then redirect the user to the Web site which they requested in the same fashion as claimed and described by applicant. The "overloaded URLs" argument is moot as the claimed limitations do not reflect such an argument.

The fourth being that "with comparison to Kirsch, Kirsch uses 'overloaded' URLs which can cause infinite redirection loops.", again it is not apparent how this "overloaded URLs" argument applies to the claims. The examiner submits, and will state again, that each of the references discloses a third-party which logs specific data concerning the path which a user took to get to that location, and a redirection operation which sends the user to their preferred location based on the advertisement which they "clicked" in the first place.

Serial Number: 08/729,188

Page 8

Art Unit: 2765

For these reasons the rejection is maintained as set forth in section 6 above.

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Stamber whose telephone number is (703) 305-8469. The examiner can normally be reached Monday-Thursday from 6:30 AM to 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allen MacDonald, can be reached at (703) 305-9708.

The fax number for Formal or Official faxes to Technology Center 2700 is (703) 308-9051 or 9052. Draft or Informal faxes for this Art Unit can be submitted to (703) 308-5397.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

AMENDMENT

In response to the Office action of February 9, 1999, please amend the above-identified application as follows:

IN THE CLAIMS

Amend claim 1:

- 1 1. (Twice Amended) A method for accounting, wherein a first publisher having a first Web site
- 2 and a second publisher having a second Web site each publish advertising for an advertiser having a third
- 3 Web site, the method comprising:
- 4 receiving, at a fourth Web site, a first uniform resource locator from a first user's Web
- 5 browser, wherein the first uniform resource locator is obtained by the first user's Web browser from
- 6 the first Web site [where] and wherein the first uniform resource locator is associated with
- 7 advertising for the advertiser;
- 8 logging, at the fourth Web site, the receipt of the first uniform resource locator, in response to
- 9 the receipt of the first uniform resource locator;
- 10 redirecting, at the fourth Web site, the first user's Web browser to the third Web site in
- 11 response to the receipt of the first [download request signal] uniform resource locator;
- 12 receiving, at the fourth Web site, a second uniform resource locator from a second user's Web
- 13 browser, wherein the second uniform resource locator is obtained by the second user's Web browser

May - 03 - 99 09:27A

P. 05

Serial No. 08/729,188

D.D. Wexler 1

14 from the second Web site [where] and wherein the second uniform resource locator is associated
 15 with advertising for the advertiser;
 16 logging, at the fourth Web site, the receipt of the second uniform resource locator, in
 17 response to receiving the second [download request signal] uniform resource locator; and
 18 redirecting, at the fourth Web site, the second user's Web browser to the third Web site in
 19 response to the receipt of the second [download request signal] uniform resource locator.

3. (Twice Amended) The method of claim 1 further comprising logging at least one of [either] an
 indicium of the identity of the first user and an indicium of the identity of the first publisher.

7. (Twice Amended) A method for third party accounting on a network that comprises a plurality
 of nodes, wherein a first node and a second node each publish advertising for a third node, the method
 comprising:
 receiving, at a fourth node, a first download request signal from a fifth node, which first
[request] download request signal is received by the fifth node from the first node;
 logging, at the fourth node, the receipt of the first download request signal;
 transmitting from the fourth node a second [request] download request signal to the fifth
 node, which second download request signal directs the fifth node towards the third node;
 receiving, at the fourth node, a third download request signal from a sixth node, which third
 download request signal is received by the sixth node from the second node;
 logging, at the fourth node, the receipt of the third download request signal; and
 transmitting from the fourth node a fourth download request signal to the sixth node, which
 fourth download request signal directs the sixth node to the third node.

REMARKS

Claims 1-11 were examined and rejected under 35 U.S.C. 102 and 112, second paragraph, and remain pending. Claims 1 and 7 were amended to address the 112, second paragraph, issues and claim 3 has been amended to delete a superfluous word.

The applicant wishes to thank Examiner Stamber for the interview at the USPTO last Thursday and includes the following remarks, which summarize the discussion at the interview. Therefore, reconsideration is respectfully requested in light of the above amendments and the following remarks.

35 U.S.C. 102 Rejection of Claims 1-9

May-03-99 09:28A

P.06

Serial No. 08/729,188

D.D. Wexler I

Claims 1-11 were rejected under 35 U.S.C. 102(e) as being anticipated by any one of the following four references:

1. T.E. Graber et al., U.S. Patent 5,712,979, issued Jan. 27, 1998 (hereinafter "Graber I");
2. T.E. Graber et al., U.S. Patent 5,717,860, issued Feb. 10, 1998 (hereinafter "Graber II");
3. T.E. Graber et al., U.S. Patent 5,812,769, issued Sep. 22, 1998 (hereinafter "Graber III"); and
4. S.T. Kirsch, U.S. Patent 5,751,956, issued May 12, 1998 (hereinafter "Kirsch").

The applicant respectfully traverses the rejection for the following reasons.

Independent claim 1 recites the interplay of signals that are transmitted between a browser (e.g., Netscape Navigator, Internet Explorer, etc.) and a plurality of Web sites for the purpose of keeping track of which Web sites are responsible for directing the user of the browser to another Web site. For example, in claim 1, the interplay is between:

- a first publisher (e.g., Yahoo, Infoseek, etc.) having a first Web site;
- a second publisher (e.g., Excite, HotBot, etc.) having a second Web site;
- an advertiser (e.g., Amazon.com, Sears, Ebay.com, etc.) having a third Web site;
- a first user having a Web browser who is attracted to the advertiser's Web site by advertising (e.g., a banner, etc.) on the first publisher's (e.g., Yahoo, Infoseek, etc.) Web site,
- a second user having a Web browser who is attracted to the advertiser's Web site by advertising on the second publisher's (e.g., Excite, HotBot, etc.) Web site, and
- a fourth Web site (i.e., the accounting Web site) that is capable of keeping track of which publisher's web site is responsible for referring each user to the advertiser's Web site.

It should be understood that the steps in claim 1 are all recited *from the perspective of the fourth Web site*. In other words, when there are multiple publisher's who publish advertising for a single advertiser, the present invention is ideal for tracking which publisher's Web site is responsible for referring each user to the advertiser's Web site. This is neither taught nor suggested by any of the references, alone or in combination.

In particular, the references neither teach nor suggest, alone or in combination, this combination and interaction of four Web sites.

Furthermore, the present invention, as recited in the claims, has other characteristics that give it advantages over the prior art.

First, the present invention enables one site to perform the accounting for multiple publishers for one advertiser. This is advantageous because the cost of a system in accordance with the present

May-03-99 09:28A

P. 07

Serial No. 08/729,188

D.D. Wexler 1

invention can be amortized over more than one publisher and because it enables an advertiser to get all of its statistics from a single source.

Second, the present invention enables the accounting site to be owned and operated by an independent entity — one that is not associated with either the publisher or the advertiser. A disadvantage with Internet accounting systems in the prior art is that the accounting is performed by either the publisher or by the advertiser. And because the amount of money paid by the advertiser to the publisher is dependent on the accounting statistics collected, there is, or is perceived to be, the temptation by the one doing the accounting to bias the statistics in its favor. In other words, advertisers don't completely trust publishers to be honest and publishers don't completely trust advertisers either.

For example, it is contemplated that the system of Kirsch is to be operated by a publisher (e.g., Infoseek, Yahoo, *etc.*) and the system of Graber I, Graber II and Graber III is to be operated by the advertiser (e.g., Amazon.com, ebay.com, *etc.*), but the present invention can be operated by an independent entity that is neither the publisher nor the advertiser.

The situation is analogous to that in television advertising. Because television advertising fees are based on ratings, television stations don't trust advertisers to tally the ratings and advertisers don't trust television stations. Therefore, the need existed for an independent entity to tally television ratings, which has been filled by the well-known A.C. Nielson Company.

In the same way that television advertising needed an independent entity to tally ratings, the Internet needs an independent entity to account for the referrals from publishers to advertisers. The present invention enables that independent entity.

Third, the present invention can be used with, but does not require, "overloaded" URLs like Kirsch or specialized software like Kirsch, Graber I, Graber II and Graber III. Instead, the present invention is a vastly more elegant solution to the problems addressed by Kirsch, Graber I, Graber II and Graber III. Remarkably, the appropriate choice of domain names and appended path names provides the present invention with enough information to both: (i) collect the appropriate accounting statistics, and (ii) redirect the incoming URLs to the appropriate advertiser's site. This is significant because it means that an accounting system in accordance with the present invention can be constructed *and* operated for a fraction of the cost of a system like that of Kirsch, Graber I, Graber II or Graber III.

Fourth, with comparison to Kirsch, Kirsch uses "overloaded" URLs which can cause infinite re-direction loops. (Kirsch Co. 9, lines 48-50). Because the present invention does not require overloaded URLs, the present invention does not have this potential problem.

May-03-99 09:28A

P.08

Serial No. 08/729,188

D.D. Wexler 1

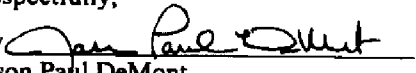

Therefore, because the independent claims, claims 1, 7 and 9, recite the interplay between four sites: multiple publishers' sites, an advertiser's site, and an independent accounting site, the applicant respectfully submits that the claims, as amended, overcome the rejection and are now allowable.

Because claims 2-6, 8 and 10-11 are dependent on either claim 1 or 7 or 9, the applicants respectfully submit that they too are allowable.

Request for Reconsideration Pursuant to 37 C.F.R. 111

Having responded to each and every ground for objection and rejection in the Office action mailed February 9, 1999, the applicant requests reconsideration of the instant application pursuant to 37 CFR 1.111 and requests that the Examiner allow claims 1-11 and pass the application to issue.

Respectfully,

By

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT.
PROSECUTION ON THE MERITS IS CLOSED.

THE ISSUE FEE MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED.

HOW TO RESPOND TO THIS NOTICE:

- I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is changed, pay twice the amount of the FEE DUE shown above and notify the Patent and Trademark Office of the change in status, or

B. If the status is the same, pay the FEE DUE shown above.
- If the SMALL ENTITY is shown as NO:

A. Pay FEE DUE shown above, or

B. File verified statement of Small Entity Status before, or with, payment of 1/2 the FEE DUE shown above.
- II. Part B-Issue Fee Transmittal should be completed and returned to the Patent and Trademark Office (PTO) with your ISSUE FEE. Even if the ISSUE FEE has already been paid by charge to deposit account, Part B Issue Fee Transmittal should be completed and returned. If you are charging the ISSUE FEE to your deposit account, section "4b" of Part B-Issue Fee Transmittal should be completed and an extra copy of the form should be submitted.
- III. All communications regarding this application must give application number and batch number. Please direct all communications prior to issuance to Box ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

Complete and mail this form, together with applicable fees, to: **Box ISSUE FEE**
Assistant Commissioner for Patents
Washington, D.C. 20231

6/10/99

MAILING INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE. Blocks 1 through 4 should be completed where appropriate. All further correspondence including the Issue Fee Receipt, the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Legibly mark-up with any corrections or use Block 1)

Patent and Trademark Office

JUN 21 1999

Note: The certificate of mailing below can only be used for domestic mailings of the Issue Fee Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing.

Certificate of Mailing

I hereby certify that this Issue Fee Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Box Issue Fee address above on the date indicated below.

CAUTION: Maintenance fee (and surcharge, if any) payment must correctly identify: (1) the patent number (or reissue patent number, if a reissue) and (2) the application number of the actual U.S. application (or reissue application) leading to issuance of that patent to ensure the fee(s) is/are associated with the correct patent. 37 CFR 1.366(c) and (d).

Also complete the following information, if applicable

The above - identified patent:

- ☐ is a reissue of original Patent No. _____, original issue date _____, original application number _____, original filing date _____.
- ☐ resulted from the entry into the U.S. under 35 U.S.C. 371 of international application _____ filed on _____.

CERTIFICATE OF MAILING (37 CFR 1.8(a))

I hereby certify that this paper (along with any paper referred to as being attached or enclosed) is being deposited with the United States Postal Service on the date shown below with sufficient postage as first class mail in an envelope addressed to Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

This is a decision on the petition under 37 CFR 1.378(c), filed May 19, 2005, to accept the delayed payment of a maintenance fee for the above-identified patent.

The petition is **GRANTED**.

The maintenance fee is hereby accepted and the above-identified patent is reinstated as of the mail date of this decision.

The patent file is being forwarded to Files Repository.

Telephone inquiries concerning this decision should be directed to the undersigned at (571) 272-3226.

A handwritten signature in black ink, appearing to read "Andrea Smith".

**RESEARCH FIRMS STRIVE FOR WEB TRACKING THAT COUNTS New Tracking Systems
Promise Individual Consumer Portraits**

Online audience measurement has long posed major challenges both for marketers and research providers. Monitoring traffic through commercial online services such as America Online and Prodigy will be tricky enough, even if the only real hazards in that closed-network market are the pricing and disclosure of proprietary usage data (IM News, June 9, 1995). The data itself (and the means to collect it) already exist.

The Internet-particularly the World Wide Web-is another story altogether.

Web technology is so new that marketers just don't have the tracking abilities they need to evaluate site performance and shop intelligently for ad space. A couple of new usage tracking systems hope to address the significant demand built up among marketers for reliable, third-party Web measurement.

Unlike commercial online services, the Web has no central turnstile that marketers can use to tally attendance. Web surfers log on anonymously and amorphously, and a single serious cybernaut is often indistinguishable from ten casual users. Web site owners have no way of telling individuals apart unless they can persuade them to register and identify themselves with a password every time they want access.

This is a problem, and many Web marketers are apprehensive about forced registration because it may alienate some users or at least deter them from taking a peek at new areas. (And some folks have trouble recalling their gym locker combinations, not to mention dozens of Web passwords they don't even use that often.)

That's where San Francisco-based Internet Profiles Corp. (I/Pro) comes in. By tracing Web users back to their Internet access points, I/Pro's tracking system could help marketers count cyber-customers one by one without disturbing (or delaying) their cruise through cyberspace.

If you can do that, "the Web is the most measurable of all media," says I/Pro president Ariel Poler.

Measures Time Spent in Site

Once they're able to individuate users, Web site owners can easily monitor how much time visitors spend on a particular page and what trajectory they take through the site as a whole, Poler explains. This is crucial intelligence for strong content evolution, according to Barrie Moore, creative services manager at I/Pro client Poppe Tyson Advertising (Mountain View, Calif....

"We want to know where people are going within the site," Moore says. Combined with user feedback forms, Poppe Tyson will use I/Pro's traffic reports to "expand content based on what people want to see," she tells IM News.

Released last month, I/Pro's system-called I/Count starts at \$200/mo. plus installation-reportedly can achieve this without forcing registration

(although that's still an option for gathering more qualitative demographic info). Currently signed are such major marketers and content providers as Playboy, Xerox, Sun Microsystems, Time Warner's Pathfinder, and Chrysler Corp.'s much-publicized new Web site, developed in part by Poppe Tyson.

Visits vs. "Hits"

Counting actual visitors rather than "hits" is a far more adequate approach to Web measurement than most content providers have used until recently. The reason: hit counts inflate true usage levels by treating multiple visits from one user (even during a single session) as separate events. Besides distorting usage on a single Web site, hit counts also make it impossible for new media planners to compare among Web sites, which can register hits quite differently depending on how they're laid out.

Another tracking firm, WebTrack (New York), also eschews hit counts for distinct visit tallies. Its auditing service—dubbed WebStat (starts at \$100/mo.)—is currently in beta testing, with commercial release slated for August. WebTrack is primarily targeting Web publishers selling ad space who need to substantiate traffic for prospective advertisers, says marketing director Carisa Wangsness.

Some beta-testers, however, are using the tracking service but refusing open auditing under non-disclosure agreements. This could change after WebStat rolls out commercially, but it also suggests that Web site owners are no more open to third-party auditing than commercial online services are.

Marketers should work to change this mindset. In the interest of creating an open and competitive ad market in cyberspace, "advertisers can help by demanding to see audited traffic info," Wangsness advises.

Qualitative Data

Besides raw traffic data, both I/Pro and WebTrack also offer marketers qualitative information about their audience. This is becoming a mounting concern as the online population grows large enough and diverse enough to be segmented. Until recently, cybermarketers have been largely unable to target their ad buys or develop proprietary site content with anything other than sheer intuition.

In addition to user individuation, both research firms' systems can trace Web site visitors back to their point of origin on the Net. In many cases, this lets marketers transparently identify a user's company, government organization, or university, and pinpoint their geographic region. If users log on via commercial access providers, however, such tracking won't reveal much about them. That's where user surveys and registration can come in handy.

Exposure Analysis

Working with I/Pro technology to offer qualitative services is The Delanaye Group (Portsmouth, N.H.), which last month rolled out a new Web analysis service called NetBench. Marrying traffic numbers with demographic survey info will help marketers get a better feel for their exposure quality, says Delanaye CEO Katharine Paine.

"Established patterns don't exist," Paine cautions. "Nobody's been doing this long enough to know if the numbers they're getting are any good. The best that you can hope for right now is that your numbers go in the right direction."

Beyond just measuring traffic growth, Delanaye hopes clients adopt its service to profile audiences, target messages and incorporate user feedback into their Web site designs. I/Pro, 415/975-5900; Delanaye, 603/431-1111; Poppe, 415/369-6800; WebTrack, 212/735-5322.

WHY WEB VISITS ARE BETTER CRITERIA THAN "HITS:"

- * Hit counts distort Web usage; Web visit tallies clarify it;
- * Hit counts inflate usage levels by treating multiple same-party visits as separate events;
- * A hit to a file doesn't actually mean it was seen by user;
- * Hit counts cloud comparisons among different Web sites;
- * A visit is a visit, but hit counts can and do vary widely according to layout/composition of the Web site;
- * Web visitors can often be traced back to their point of Internet access
-which might offer a trove of marketing/ demographic info.

Abstract: (ENG) A system and method for providing on-line third party accounting and statistical information is disclosed. A third party accounting service receives a download request signal ultimately intended for an advertiser Web site. The download request signal is generated when a user clicks on a banner displayed on a Web page of a frequently-visited Web site. The banner is published by the frequently-visited Web site for the benefit of the advertiser. The third party receives the download request since, rather than pointing to the advertiser Web site, the banner is configured to point to the third party Web site. The third party Web site maintains a count of all received download request signals generated by clicking on the banner. Since an advertiser banner may be displayed at more than one frequently-visited Web site, the third party Web site further maintains a log containing the address of the frequently-visited Web site that displayed the banner that generated the click, as well as other information provided by the user Web browser. The third party sends a redirect signal to the user Web browser causing it to send a download request to the advertiser Web site. The advertiser Web site then downloads the information originally sought by the user to his Web browser. The third party accumulates and tabulates statistical information including the number of clicks on the advertiser banner, and data indicative of the effectiveness of the banner-publisher frequently-visited Web site as an advertising medium. Such information is provided to the advertiser and/or the banner publisher.
